

Formability
Ticks All The Boxes

Singleton Clamp & Partners have nearly 30 years experience in Transportation Planning and Infrastructure Engineering, with an enviable reputation of providing effective and commercially aware advice in the planning and implementation of all types of projects ranging in scale from the smallest involving private individuals up to the largest involving internationally known companies as well as Central and Local Government. The Company operates from Lawrence Buildings, 2 Mount Street Manchester which is a centrally located four storey office building in the heart of Manchester City Centre.

One of the challenges that faced **Singleton Clamp & Partners** was the need to survey a client's employee, visitor or student travel profile in order to make informed judgements regarding transportation planning decisions. Historically, producing, collecting and collating feedback was a long and laborious process, and so Singleton Clamp & Partners commissioned **Formability** (as it is now) to develop inform, an online data collection tool to assist in this process.

This tool was successfully used to help in a number of planning scenarios. It has also been customised to meet the needs of particular contracts and has interfaced with one of their customer's computer systems, which is something that couldn't be done with an off-the-shelf package.

Formability continues to support **Singleton Clamp & Partners** and has also taken on Singleton Clamp & Partners web hosting and email support. This involves email management, and keeping Singleton Clamp & Partners web presence active.

Jim Budd, Technical Director of Singleton Clamp & Partners says, "we were impressed with **Formability's** attention to detail and willingness to ensure that the product met our needs and expectations."
